

Implemented Use Cases

P1UC01: Register New Account

User registers with personal and company information, system creates account and tenant atomically, and sends verification email.

P1UC02: Resend Verification Email

User requests a new verification email when the original token has expired or was not received.

P1UC03: Verify Email Address

User clicks verification link in email to activate their account and gain access to the system.

P2UC01: Login

User enters their credentials to access the system.

P2UC02: Forgot Password

User requests a password reset link via email to regain access to their account.

P3UC01: View Dashboard Landing Page and Company Information

Company owner accesses personalized dashboard with company details and navigation structure after login.

P3UC02: Access User Profile Menu and Switch Interface Language

Company owner switches interface language between English and Persian from profile dropdown menu.

P3UC03: Navigate Using Sidebar Menu and View Dashboard Metrics Placeholders

Company owner uses sidebar navigation and views placeholder cards for future business metrics.

P3UC04: Logout from Dashboard and Recover from Session Expiration

Company owner logs out or is automatically redirected to login when session expires.

P4UC01: Create New User Account

Company owner creates a new staff member account with basic profile information, assigns initial role, and system sends welcome email with temporary password.

P4UC02: View and Search User List

Company owner views all users within their organization with filtering and search capabilities by status, role, or name/email.

P4UC03: Assign and Modify User Roles

Company owner assigns or changes roles for existing users, with system enforcing owner role protection and applying permission changes immediately.

P4UC04: Edit User Profile Information

Company owner updates existing user's profile details including name, email address, and phone number with validation and audit trail.

P4UC05: Deactivate and Reactivate User Accounts

Company owner deactivates user accounts to revoke system access or reactivates previously deactivated accounts, with immediate session invalidation.

P4UC06: First-Time Login and Password Change

Newly created user logs in using welcome email credentials, verifies email address, and changes temporary password to personal one meeting security requirements.

P5UC01: Create Equipment Category

Company owner or manager creates a new equipment category to establish organizational structure for rental inventory with hierarchical classification support.

P5UC02: View Equipment Categories

Company staff members view and search through equipment categories using filters and hierarchical tree structure to locate specific categories.

P5UC03: Update Equipment Category

Authorized user modifies existing category information including name, description, parent category relationship, or status to maintain accurate organizational structure.

P5UC04: Archive Equipment Category

Authorized user deactivates unused categories while preserving data for audit purposes, or permanently deletes categories with no dependencies.

P6UC01: Add Equipment to Inventory

Authorized users (company owner, manager, staff) add new equipment items to the rental inventory by providing equipment details including name, category, manufacturer, model, serial number, specifications, and initial status.

P6UC02: Browse and Search Equipment

Users view all equipment items within their company inventory and utilize search and filter capabilities (by status, category, manufacturer, date range) to locate specific equipment efficiently.

P6UC03: View Equipment Details

Users access complete information about a specific equipment item including all specifications, financial data, custom attributes, status, and metadata.

P6UC04: Edit Equipment Information

Authorized users modify existing equipment details including basic information, financial data, category assignment, and custom attribute specifications while maintaining data integrity and audit trail.

P6UC05: Manage Equipment Status and Lifecycle

Users update equipment operational status (available, rented, maintenance, out of service), archive equipment for historical retention, or permanently delete equipment that has no dependencies.
